FOR IMMEDIATE RELEASE – February 11, 2002

FOR: Hurricane Hydrocarbons Ltd.

SUBJECT: Exploration Success

CALGARY, Alberta – Hurricane Hydrocarbons Ltd. (“Hurricane”) announces that it has completed the drilling of the first of six deep play exploration wells in license 260 D1, which are part of its 2002 exploration campaign. The well was drilled to confirm the concept of deeper oil bearing sands extending into the unexplored section of the South Turgai Basin. North Nurali 1 was drilled to 2,265 meters and has produced light 47.6 API gravity, low sulphur crude from deep sands under natural flow during an initial open hole test. Detailed testing of these deeper sands and certain sections in the upper horizons will be conducted over the next two weeks using a well service rig.

This excellent result gives strong confirmation of the theory of producible hydrocarbons in the unexplored deeper stratigraphic horizons, which is a key component in Hurricane’s continued upstream growth.

The rig will move to North Nurali 2 to explore a separate and independent deep prospect to the east of North Nurali 1.

Hurricane is using a Western type-drilling rig from a Polish contractor for its 2002 exploration campaign. The rig has been used by Hurricane for appraisal and development drilling of the QAM fields where its performance was superior to that of other previous drilling units.

Hurricane is an international energy corporation engaged in the exploration, development, production, acquisition, refining and marketing of crude oil and refined products in the Republic of Kazakhstan.

Hurricane’s shares trade on The Toronto Stock Exchange under the symbol HHL.A, in the United States on Nasdaq under the symbol HHLF and on the Frankfurt exchange under the symbol HHCA. Hurricane’s 12% Senior Notes due 2006 are listed on the Toronto Stock Exchange under the symbol HHL.DB.U and on the Luxembourg Stock Exchange. The company’s website can be accessed at www.hurricane-hhl.com.
